EXECUTIVE SUMMARY

This Phase I environmental site assessment was conducted in general conformance with the scope and limitations of American Society for Testing and Materials (ASTM) Standard E1527-05. The scope of work for this assessment is provided in Section 1.2 of this report.

Site Location and Description - The subject site includes approximately 13.1 acres of land located at 20451 Cramer Lane, in the City of Huntington Beach, California. At the time of this assessment, a one-story building being utilized as office space by the Huntington Beach City School District was located within the site's north-central portion. Concrete-paved sidewalks and well-maintained landscaped areas were located immediately north and east of this building. Asphalt-paved driveways, parking areas, and an exterior storage area were located immediately south and west of the building. An asphalt-paved parking lot was located in the site's northeastern portion. The site's eastern portion was in use as a park that contained a relatively small snack bar/building, two tennis courts, children's playground equipment, and landscaped areas. Six baseball fields were located within the site's south-central and western portions. Two of the fields were relatively small, two were of intermediate size, and two were relatively large (standard size). The areas adjoining these fields were generally covered with well-maintained grass lawns.

Site History - Based on data collected during this assessment, the site was in agricultural use (fields) between at least 1938 and 1953. An apparent single-family dwelling was located in the site's central portion between at least 1947 and 1953. This dwelling was removed between 1953 and 1965. The site's central and western portions were developed as an elementary school in 1967. The school closed in 1981, and opened as the School District's office in 1982. This school building has been utilized as office space by the District since this time. Baseball fields were developed in the site's western and south-central portions between the 1970s and 2000s.

A relatively small building (existing snack bar) was placed in the site's eastern portion in the late 1960s. During this time, the site's eastern portion was primarily covered with soil and sparse vegetation. This area was developed as a park between 1968 and 1977. It has been in a similar state since being developed.

Onsite Hazardous Material Sources and Releases - Evidence for aboveground or underground storage tanks, clarifiers, sumps, or other potentially hazardous material-containing structures was not encountered on any portion of the site during this assessment. As noted above, the site was in agricultural use between the 1930s and 1950s. As such, persistent pesticides may be present within the site's surficial soils. Due to the absence of orchards and row crops, which are relatively heavy users of pesticides, pesticide concentrations that exceed regulatory limits are not anticipated in the site's surficial soils.

Regional Hazardous Material Releases - Based on a review of properties within the site vicinity and data made available during this assessment, it is our opinion that there is a relatively low potential that contaminants from offsite properties have migrated to the subject site and have impacted the underlying soil and/or groundwater.

Recommendations - Soil and/or groundwater environmental studies are not recommended for the site. Based on the findings of this assessment, there are no known onsite conditions that would warrant regulatory involvement regarding such studies, including actions leading to environmental soil sampling, soil remediation, groundwater monitoring, groundwater sampling, and/or groundwater remediation.

State records report that 37.91 tons of asbestos-containing materials have been removed from the site's address, which suggests that an asbestos abatement has taken place at the site. If records cannot be located that show that asbestos-containing materials have previously been identified and removed, it is then recommended that an asbestos survey be conducted at each of the onsite building structures (District Office building and snack bar building) prior to any site redevelopment. Asbestos-containing building materials were phased out in the mid to late 1970s, after the onsite buildings were developed. The asbestos survey, if conducted, must be overseen by a California Certified Asbestos Consultant. The results of this survey should provide a description of the asbestos-containing materials, their locations, estimated quantity, and recommendations for removal, containment, and off-site transportation and disposal.

In addition to the asbestos surveys, it is recommended that the onsite building structures be assessed for the possible presence of lead-based paint. Lead use in commercial paint was prohibited in 1978. This study must be conducted by trained and/or licensed professionals. The results of this study should provide a description of the lead-based paint locations, estimated quantity, and recommendations for removal, containment, and off-site transportation and disposal.

As always, we recommend that soil excavations conducted onsite be monitored (by the construction contractor) for visible soil staining, odor, and the possible presence of unknown hazardous-material sources, such as buried 55-gallon drums and underground tanks (although not anticipated). If hazardous materials contamination or sources are suspected or identified, an environmental professional should evaluate the course of action required.

Phase I Environmental Site Assessment Report

*Le Bard School Site
20451 Cramer Lane,
Huntington Beach, California*

1.0 INTRODUCTION

1.1 PURPOSE

The purpose of this study was to assess whether hazardous material contamination has impacted the soil and/or groundwater underlying the 13.1 acre property located at 20451 Cramer Lane, in the City of Huntington Beach, California (Figure 1).

1.2 SCOPE OF WORK

This Phase I environmental site assessment was conducted in general conformance with the scope and limitations of American Society for Testing and Materials (ASTM) Standard E1527-05. The scope of work for this assessment included the following:

- Site reconnaissance to visually assess current site utilization, potential onsite use or storage of hazardous materials, and indications of surface and subsurface contamination;
- Review of local geology and hydrogeology using readily available data;
- Review of current and historical conditions and uses of the site and immediate vicinity using available resources, including:
 - historical aerial photographs and topographic maps,
 - environmental and geologic reports and maps,
 - state and federal government databases,
 - local agency files,
 - oil field maps,
 - street directories, and
 - communication with onsite representatives.
- Preparation of this report.

Data gaps to the ASTM Standard E1527-05 for this report include the following:

- Interviews with adjoining property owners,
- Review of chain of title documents, and
- An assessment of the site's purchase price and the fair market value.

The references used in this study are listed in Section 8.0. Color photocopies of selected photographs taken during the site reconnaissance are included in Appendix A. Copies of aerial photographs, topographic maps, and assessor parcel maps are provided in Appendix B. The search of government documents was subcontracted to Environmental Data Resources, Inc. (EDR). A copy of EDR's report is included in Appendix C.

2.0 SITE OVERVIEW

2.1 LOCATION

The subject site includes approximately 13.1 acres of land located at 20451 Cramer Lane, in the City of Huntington Beach, California (Figures 1 and 2). It is located immediately south and southwest of the intersection of Cramer Lane and Warwick Drive. Parcel maps that include the site's location are provided in Appendix B (APNs 155-131-29, 155-145-01, and 155-151-01).

2.2 SITE DESCRIPTION

At the time of this assessment, a one-story building being utilized as office space by the Huntington Beach City School District was located within the site's north-central portion. Concrete-paved sidewalks and well-maintained landscaped areas were located immediately north and east of this building. Asphalt-paved driveways, parking areas, and an exterior storage area were located immediately south and west of the building. An asphalt-paved parking lot was located in the site's northeastern portion. The site's eastern portion was in use as a park that contained a relatively small snack bar/building, two tennis courts, children's playground equipment, and landscaped areas. Six baseball fields were located within the site's south-central and western portions. Two of the fields were relatively small, two were of intermediate size, and two were relatively large (standard size). The areas adjoining these fields were generally covered with well-maintained grass lawns. For a more detailed description of the site, refer to Section 3.1 of this report.

2.3 SITE HISTORY

Based on data collected during this assessment, the site was in agricultural use (fields) between at least 1938 and 1953. An apparent single-family dwelling was located in the site's central portion between at least 1947 and 1953. This dwelling was removed between 1953 and 1965. The site's central and western portions were developed as an elementary school in 1967. The school closed in 1981, and opened as the School District's office in 1982. This school building has been utilized as office space by the District since this time. Baseball fields were developed in the site's western and south-central portions between the 1970s and 2000s.

A relatively small building (existing snack bar) was placed in the site's eastern portion in the late 1960s. During this time, the site's eastern portion was primarily covered with soil and sparse vegetation. This area was developed as a park between 1968 and 1977. It has been in a similar state since being developed.

2.4 GEOLOGY

The subject site is located between 8 and 10 feet above mean sea level (USGS, 1981; Figure 1). The site and immediate site vicinity slope very gently toward the south. Soils underlying the site are comprised of Recent-age alluvial (river) deposits (Morton and Miller, 1981). These deposits are described as primarily being inter-layered olive brown and gray silts and clays to depths up to at least 50 feet (NMG, 2012).

The Newport-Inglewood fault is the closest known active fault within the site vicinity. This fault is mapped approximately 2 miles south-southwest of the site (Jennings and Bryant, 2010).

2.5 HYDROGEOLOGY

The depth to groundwater within the principal aquifer beneath the site was approximately 30 feet in June 2011, with a flow direction toward the south (OCWD, 2011). The groundwater within this aquifer (referred to as the Talbert Aquifer) is not utilized due to significant deterioration of quality from seawater intrusion (OCWD, 2009). Perched groundwater is reported above the principal aquifer at a depth of approximately 3 feet (from: <http://www.huntingtonbeachca.gov/government/departments/planning/gp>). This perched groundwater was recently reported at a depth of approximately 5 feet, but anticipated to fluctuate seasonally (NMG, 2012).

3.0 ASSESSMENT REVIEW

3.1 SITE INSPECTIONS AND OBSERVATIONS

On January 17, 2012, a Black Rock Geosciences representative visited the site to assess its current utilization and visually search for indications of surface and subsurface contamination. Photographs taken during the site visit are included in Appendix A. Observations made during the site reconnaissance are presented below.

- At the time of this assessment, a one-story office building being utilized by the Huntington Beach City School District was located within the site's north-central portion (Photo Nos. 1 through 9). The interior portions of this building were not observed, but reported to be primarily used as office space. Although common cleaning materials are anticipated within this building, relatively large quantities (greater than 10 gallons) of potentially hazardous materials are not suspected or reported within this building.
- Concrete-paved sidewalks and well-maintained landscaped areas were located immediately north and east of the onsite office building. Asphalt-paved driveways, parking areas, and an exterior storage area were located immediately south and west of the building. The storage area (secured with chain link fencing) contained children's playground equipment. Three cargo containers located immediately southwest of the building were locked and not entered (Photo No. 10).
- An asphalt-paved parking lot was situated in the site's northeastern portion (Photo Nos. 11 and 12). Significant motor oil releases were not observed within this parking lot.
- The site's eastern portion was in use as a park, and contained a relatively small snack bar building, two tennis courts adjoined by chain link fencing, children's playground equipment, and landscaped

lawns, shrubs, and trees (Photo Nos. 13 through 18). Potentially hazardous material storage structures and/or release areas were not observed within this portion of the site.

- Six baseball fields are located within the site's south-central and western portions (Photo Nos. 19 through 25). These fields were of various sizes, but contained the standard components of baseball fields. Two of the fields were relatively small, two were of intermediate size, and two were relatively large (standard size). Spectator stands and well-maintained grass lawns adjoined the baseball fields.
- The site's southwestern and western portions were covered with well-maintained and contiguous grass lawn (Photo Nos. 26, 27, 28, and 29).
- A concrete-paved entrance to the site was located immediately north of the site's northwestern corner (Photo No. 30).
- None of the following were observed within the site:
 - Fill ports or vent pipes to underground storage tanks
 - Aboveground storage tanks
 - Indications of septic systems
 - Groundwater and/or vadose zone wells
 - Mounds or depressions suggesting trash or other solid waste disposal areas
 - Pools of liquid or potentially hazardous substances
 - Hazardous material storage structures
 - Wastewater discharge pipes
 - Clarifiers, ponds, pits, sumps, or other underground waste disposal areas
 - Unusual or noxious odors

3.2 PROJECT VICINITY

Properties adjoining the site were reviewed for evidence of possible contaminant sources and/or releases. A brief description of these properties is provided below.

- Single-family dwellings within a residential development were located immediately north of the site. These residential properties were separated from the site by a concrete block wall. Three roadways (Craimer Lane, Warwick Drive, and Ravenwood Lane) passed by the site's northeastern portion and some of these dwellings (Photo Nos. 31, 32, and 33). Potentially hazardous material sources and/or releases were not observed within the roadways or visible portions of the residential properties located immediately north of the site.
- A plant nursery was situated immediately northeast of the site (Photo No. 34). This nursery and the soil-covered area immediately east of the site were within an electric power transmission corridor. Utility poles, metals towers, and associated electric lines were included within this corridor (Photo No. 35). Potentially hazardous material sources (including electrical transformers) and/or releases were not observed within the areas located east of the site.
- Cynthia Drive is located along the site's southern side (Photo No. 36). Single-family dwellings within a residential development were located immediately south of this roadway and the site.

Potentially hazardous material sources and/or releases were not observed within the roadway or visible portions of the residential properties located immediately south of the site.

- The properties located immediately west of the site were in residential use (single-family dwellings). These properties were separated from the site by a concrete block wall (exteriors not observed).

3.3 REVIEW OF AERIAL PHOTOGRAPHS

The following aerial photographs were reviewed to assess land use over time and look for evidence of potentially hazardous material storage, usage, and/or disposal areas. Copies of these photographs, with the exception of the photograph dated 2011, are provided in Appendix B. The 2011 photograph is provided as a background for Figure 2.

AERIAL PHOTOGRAPHS REVIEWED

<i>Date</i>	<i>Scale</i>	<i>Source</i>
1938	1" = 555'	Laval
1947	1" = 666'	Fairchild
1953	1" = 666'	Pacific Air
1968	1" = 480'	Teledyne
1977	1" = 666'	Teledyne
1990	1" = 666'	USGS
1994	1" = 500'	EDR
2005	1" = 500'	EDR
2011	1" = 160'	Google Earth

In the 1938 aerial photograph, manmade structures are not visible within or immediately adjacent to the site. The site and adjoining properties are primarily covered with a relatively light growth of vegetation. These areas appear to be dry farmed. The site's eastern portion and adjoining areas appear to be in a natural state, covered with a moderate to heavy growth of vegetation. The Santa Ana River is visible east of the site, past an apparent dike. Brookhurst Avenue is visible west of the site. Indications of potential contaminant sources, such as landfills, large aboveground tanks, oil wells, or pipelines, are not visible onsite or within the adjoining properties.

In the 1947 and 1953 aerial photographs, a residential-size building structure is visible within the site's central portion. An east-west trending unpaved roadway passes through the site's central portion. No other manmade structures are visible within the site. The site appears to be part of a relatively large agricultural field that extends to the north, south, and west. A residential-size building is visible immediately west of the site. No other building structures are visible within the site vicinity. The Santa Ana River appears fully channelized immediately east of the site. Potential contaminant sources are not visible within the site or site vicinity.

In the 1968 aerial photograph, an apparent school building is visible within the site's north-central portion (similar to present). Asphalt-paved areas are visible south and west of this building. Concrete-paved sidewalks and vegetated areas are visible north and east of the building. Apparent grass lawns are visible in the site's south-central and western portions. The site's eastern portion appears covered with soil. A

relatively small building structure is visible within this portion of the site in a location similar to the existing snack bar building. Residential developments containing single-family dwellings are now visible north, south, and west of the site, similar to present. Potential contaminant sources are not visible within the site or site vicinity.

In the 1977, 1990, 1994, 2005, and 2011 aerial photographs, the site and adjoining properties appear in a similar state to that observed in the 1968 aerial photograph. A park is now visible in the site's eastern portion, similar to present. Two baseball fields are visible in the site's western portion in the 1977 and 1990 aerial photographs. Four baseball fields are visible in 1994, five baseball fields are visible in 2005, and six baseball fields are visible in 2011 (similar to present). Potential contaminant sources are not visible within the site or site vicinity.

3.4 REVIEW OF MAPS AND REPORTS

3.4.1 USGS TOPOGRAPHIC MAPS

Topographic maps (Santa Ana and Newport Beach, California, quadrangles) dated 1901, 1935, 1942, 1951, 1965, 1972, and 1981 and covering the site and vicinity were reviewed as part of this assessment. Copies of these maps are provided in Appendix B of this report. As noted in the 1901 topographic map, manmade structures are not shown within the site or adjoining properties. The Santa Ana River is shown approximately 1,200 feet east of the site, in an alignment different than present. The closest manmade structure, a north-south trending roadway (Bushard Street), is shown approximately 3,000 feet west of the site. Structures of concern, such as pipelines, oil wells, aboveground tanks, and landfills, are not shown within the site or immediate site vicinity.

In the 1935 and 1942 topographic maps, manmade structures are not shown within or immediately adjacent to the site. Brookhurst Street (formerly Wright Street) is shown approximately 350 feet west of the site. A residential-size structure is shown approximately 250 feet southwest of the site in the 1935 topographic map. The Santa Ana River is shown channelized east of the site, in a location similar to present. Structures of concern are not shown within the site or immediate site vicinity.

In the 1951 topographic map, a residential-size structure is shown within the site's central portion. An unpaved roadway traverses from this structure to the west. No other manmade structures are shown within or immediately adjacent to the site. Structures of concern are not shown within the site or immediate site vicinity.

In the 1965 topographic map, a residential-size structure is no longer shown within the site's central portion. Indianapolis Avenue is shown passing east-west through the site's central portion. This road is shown as being unpaved. A residential-size structure is shown immediately west of the site. Aboveground electric lines are now shown along the site's eastern side, between the Santa Ana River and the site. No other manmade structures are shown within or immediately adjacent to the site. Structures of concern are not shown within the site or immediate site vicinity.

In the 1972 and 1981 topographic maps, a commercial-size building structure is shown within the site's north-central portion (similar to present). Indianapolis Avenue, still unpaved, is shown through the site in the 1972 topographic map. This roadway is not shown within the site on the 1981 map. With the exception of the building and roadway, no other manmade structures are shown within the site. The properties located north, south, and west of the site are shaded red, indicating that they have been developed. Roadways, similar to present, pass throughout these developed areas (currently single-family

homes). Electric power lines remain shown immediately east of the site. Structures of concern are not shown within the site or immediate site vicinity.

3.4.2 SANBORN INSURANCE MAPS

Sanborn Maps, requested for this assessment, were not found for the site or site vicinity.

3.4.3 OIL FIELD MAPS

Oil well maps provided by the California Division of Oil, Gas, and Geothermal Resources (CDOGGR) were searched via their search program at <http://maps.conservation.ca.gov/doms/index.html>. Based on a review of the maps provided by CDOGGR, there are no oil wells located within 1,000 feet of the site. The closest oil well shown (Amerada Hess Corp. "Irvine" 75-7) is located approximately 1,175 feet southwest (downgradient) of the site. This is noted to be a "plugged well" beneath Saline Drive. Due to the location of this well, any associated potentially hazardous material releases are not considered a threat to the soil and/or groundwater underlying the site.

3.4.4 ASSESSOR PARCEL MAPS

Assessor parcel maps and associated property profiles were obtained for the site for review. Copies of assessor parcel maps are included in Appendix B. The assessor parcel maps shows the location and dimensions of the parcels included within this assessment (APNs 155-131-29, 155-145-01, and 155-151-01). Easements through the site, including for chemical and/or petroleum hydrocarbon pipelines, are not shown on these maps.

The property profiles report that the owner of the onsite parcels is the "Huntington Beach City School District". Owners commonly associated with hazardous material use, such as fuel service stations, were not listed in the property profiles. The use of the site is noted as being "Tax Exempt." Aboveground buildings are not listed at the site. The site is noted to be 13.1 acres in area. No other pertinent data were provided within the property profiles.

3.4.5 STREET DIRECTORIES

Street directories typically list the year and reported occupant for each site address. The site's address (20451 Cramer Lane) was listed between 1975 and 2008 with the following uses: LeBard E&M School, Huntington Beach SC Elementary/Administration, and Rinald's Child Care Center. As noted, the associated uses of the site address are related to the school, school district, and a day care center. Property uses that may suggest that hazardous material sources (such as fuel service stations or oil-related operations) were not listed in the street directories searched.

All but one of the near vicinity addresses were reported to be in residential use. A listing provided for the address at 20461 Cramer Lane was for the Seaview Little League. This address is suspected of being for the relatively small building in the site's east-central portion.

3.5 ENVIRONMENTAL DATABASE REVIEW

Environmental Data Resources, Inc. (EDR) conducted a search of available environmental records for the site and properties up to 1 mile away from the site. The search met the specific requirements of ASTM Standard Practice for Environmental Site Assessments, E1527-05, including those associated with

government databases, search distances, and data currency. EDR's report, dated January 13, 2012, is included as Appendix C of this report. Pages 1 through 7 of the executive summary for the EDR report list the federal and state environmental databases searched for this assessment. A description of these databases is provided at the end of EDR's report.

A map provided in the EDR report shows the location of the subject site and properties within the search distances defined by ASTM (see Page 2 in Appendix C). As noted in the EDR report, the site is listed within one of the environmental databases searched. It is listed in the HAZNET database due to the offsite transportation of 37.91 tons of asbestos-containing waste. This suggests that asbestos containing building materials were removed from either the onsite building structure or from school buildings within the school district. The site was not listed within any other databases searched.

There are four properties listed within 1 mile of the site that have, or have the potential to release hazardous materials into the subsurface soil and/or groundwater. Each of these properties is located north-northwest of the site, in an upgradient location. Hazardous materials released at up-gradient properties would, due to their location, have the greatest potential to impact the soil and/or groundwater beneath the site. Impacted groundwater beneath such properties would be anticipated to migrate into or toward the subject site. A summary of these properties is provided below.

Summary of Properties Listed Upgradient of Site				
EDR ID No.	Business Name	Address	Environmental Database Lists	Comments
4	Goodyear Tire Repair	20052 Brookhurst St. Huntington Beach	ENVIROSTOR	This property is under investigation for a possible hazardous material release (none currently reported). Due to its distance from the site (approximately 2,000 feet), any released potentially hazardous materials are currently not considered a threat to the soil and groundwater underlying the site.
5	Best Cleaners	10109 Adams St., Huntington Beach	ENVIROSTOR	This property is under investigation for a possible hazardous material release (none currently reported). Due to its distance from the site (approximately 2,400 feet), any released potentially hazardous materials are currently not considered a threat to the soil and groundwater underlying the site.
B6	Shell Service Station	20001 Brookhurst St. Huntington Beach	RCRA-SQG, LUST, CA FID UST, HAZNET	This property is reported as being a small quantity generator of potentially hazardous materials. It is also reported as having released gasoline from underground storage tanks into the underlying soil and groundwater. The remediation of impacted soil and groundwater is underway. As noted in Section 3.6, the released fuel does not extend south (toward the site) of this property's southern boundary. The fuel released, therefore, is not considered a potential threat to the soil and/or groundwater underlying the site.
B7	Super 7 Gasoline Unit # 18891 / Southland	10001 Adams St., Huntington Beach	Notify 65, LUST, HIST CORTESE	This property is reported as releasing gasoline into the underlying soil and groundwater. This case was closed in 1997.

Summary of Properties Listed Upgradient of Site				
EDR ID No.	Business Name	Address	Environmental Database Lists	Comments
	Corporation			indicating that the impacted soil and groundwater has been remediated to the satisfaction of the regulating agency.

Table information source: EDR

Seven properties are listed in the “Orphan Summary” of EDR’s report. Such properties could not be geocoded by EDR because location information supplied by the regulatory agencies was insufficient to allow EDR to geocode the facility locations. Based on a review of the addresses provided for the orphan properties, none are located within one mile of the site.

Based on a review of the properties listed in the environmental databases searched, none are considered to have the potential to impact the soil and/or groundwater underlying the subject site.

3.6 AGENCY CONTACTS AND MATERIALS

A list of properties regulated by the Orange County Health Care Agency (OCHCA) was obtained from their online source ([http://ochealthinfo.com/docs/regulatory/eh/Hazardous Waste Facilities Listing.pdf](http://ochealthinfo.com/docs/regulatory/eh/Hazardous_Waste_Facilities_Listing.pdf)) and reviewed for properties located within the site vicinity. There were no listed properties within the immediate site vicinity listed in the OCHCA database.

Records from the Regional Water Quality Control Board (RWQCB) were searched via their online search program at <http://geotracker.swrcb.ca.gov>. A search of this database revealed four properties up-gradient (north to north-northwest) and within 1 mile of the site. Each of these properties, listed below, is reported as having released gasoline or diesel into the underlying soil and groundwater.

- Bushard Fire Station at 19711 Bushard Street (approximately 4,930 feet from site)
- Chevron service station at 9971 Adams Street (approximately 2,570 feet from site)
- Southland Corporation at 10001 Adams Street (approximately 2,470 feet from the site)
- Shell Oil service station at 20001 Brookhurst Street (approximately 2,220 feet from the site)

The first three cases listed above have been closed, indicating that the gasoline or diesel has been successfully remediated. Due to the status of these cases (closed) and their distance to the site (between 0.4 and 1 miles), the fuel released at these properties is not considered a potential threat to the soil and/or groundwater underlying the site. The contaminants within soil and groundwater at the fourth listed property have not migrated south (toward the site) of this property’s southern border (Wayne Perry, Inc., 2011). As such, the contaminants released at this property are also not considered a threat to the soil and/or groundwater underlying the subject site.

Records from the South Coast Air Quality Management District (AQMD) were searched via their on-line search program at <http://www.aqmd.gov>. The subject site (Huntington Beach City School District at 20451 Cramer Lane) is listed in the AQMD records for unknown purposes. It is reported as being an active elementary or secondary school. There was no equipment listed for the site, such as boilers or backup generators. Violations have not been reported for the site. There were no AQMD listed properties within the immediate site vicinity.

Records from the Department of Toxic Substances Control (DTSC) were searched via their online search program at <http://www.envirostor.dtsc.ca.gov/public>. A search of this database revealed no DTSC-regulated property within 1 mile of the site.

3.7 DISCUSSION WITH ONSITE REPRESENTATIVE

Mr. Jon Archibald of the Huntington Beach City School District was questioned regarding the site's history and any associated hazardous materials sources and/or releases. He noted that the existing school District Office building was built as an elementary school (kindergarten through 5th grade) in 1967. The elementary school closed in June 1981, and opened as the District Office in the spring of 1982. It has been in use as the District Office since this time.

Mr. Archibald noted that there are no relatively large quantities (greater than 10 gallons) of potentially hazardous materials within the site. He noted that the site never utilized a heating oil system, nor had a backup generator (with associated fuel tank). Mr. Archibald had no knowledge of potential contaminant sources (including underground tanks) or contaminant releases within the site.

4.0 FINDINGS

4.1 BUILDING CONSTRUCTION MATERIALS

Asbestos- and lead-containing building materials are suspected within the site. The onsite buildings (District Office building and snack bar building) were constructed in the 1960s. Asbestos-containing building materials and lead-based paint were phased out in the mid- to late 1970s. Asbestos and lead surveys were not conducted as part of this assessment. Note that State records report that 37.91 tons of asbestos-containing materials were removed from the site's address, which suggests that it was removed from either the onsite building structures or from school buildings within the school district.

4.2 ONSITE HAZARDOUS MATERIAL USE

Pesticides/Herbicides - The site was in agricultural use between the 1930s and 1950s. As such, persistent pesticides may be present within the site's surficial soils. Due to the absence of orchards and row crops, which are relatively heavy users of pesticides, pesticide concentrations that exceed regulatory limits are not suspected in the site's surficial soils.

Chemical/Petroleum Hydrocarbon Materials - Records or visible indications of potentially hazardous chemicals/petroleum hydrocarbon use at the subject site were not encountered during this assessment.

Potential Hazardous Materials Storage Structures - Evidence for aboveground or underground storage tanks, clarifiers, sumps, or other potentially hazardous material storage structures was not encountered on any portion of the site during this assessment.

Regulatory Actions - Regulatory actions are not known or suspected of having been issued for the subject site.

4.3 SUBJECT SITE VICINITY

Landfills - There are no landfills reported within 1 mile of the subject site.

Regional or Adjacent Hazardous Material Releases - National Priority List (NPL) sites (large-scale releases of hazardous materials) are not reported within 1 mile of the site. In addition, there are no regulatory listed properties within 1 mile of the site that are considered as having a potential to impact the soil and/or groundwater underlying the site.

Radon - Orange County radon levels reportedly average 0.3 picocuries in first-floor levels for zip code 92646. The U.S. Environmental Protection Agency (EPA) maximum allowable level is 4 picocuries. Radon concentrations above the EPA allowable level are not expected at the subject site.

Asbestos - Sources for asbestos-containing rock are not located within 10 miles of the site (CDOGGR, 2000). The closest known potential source of rocks containing asbestos is located approximately 101 miles northwest of the site, within the east-central portion of Santa Barbara County.

Potable Water Source - The site and adjoining areas are provided potable water by the city of Huntington Beach. This water is a blend of groundwater provided by the Orange County Water District and water imported from Northern California and the Colorado River by the Municipal Water District of Orange County via Metropolitan Water District of Southern California. The 2011 water quality report for the city of Huntington Beach can be obtained online at: http://www.huntingtonbeachca.gov/government/departments/public_works/utilities/quality/.

5.0 CONCLUSIONS AND RECOMMENDATIONS

5.1 CONCLUSIONS

Site History - Based on data collected during this assessment, the site was in agricultural use (fields) between at least 1938 and 1953. An apparent single-family dwelling was located in the site's central portion between at least 1947 and 1953. This dwelling was removed between 1953 and 1965. The site's central and western portions were developed as an elementary school in 1967. The school closed in 1981, and opened as the School District's office in 1982. This school building has been utilized as office space by the District since this time. Baseball fields were developed in the site's western and south-central portions between the 1970s and 2000s.

A relatively small building (existing snack bar) was placed in the site's eastern portion in the late 1960s. During this time, the site's eastern portion was primarily covered with soil and sparse vegetation. This area was developed as a park between 1968 and 1977. It has been in a similar state since being developed.

Onsite Hazardous Material Sources and Releases - Evidence for aboveground or underground storage tanks, clarifiers, sumps, or other potentially hazardous material-containing structures was not encountered on any portion of the site during this assessment. As noted above, the site was in agricultural use between the 1930s and 1950s. As such, persistent pesticides may be present within the site's surficial soils. Due to the absence of orchards and row crops, which are relatively heavy users of pesticides, pesticide concentrations that exceed regulatory limits are not anticipated in the site's surficial soils.

Regional Hazardous Material Releases - Based on a review of properties within the site vicinity and data made available during this assessment, it is our opinion that there is a relatively low potential that contaminants from offsite properties have migrated to the subject site and have impacted the underlying soil and/or groundwater.

5.2 RECOMMENDATIONS

Soil and/or groundwater environmental studies are not recommended for the site. Based on the findings of this assessment, there are no known onsite conditions that would warrant regulatory involvement regarding such studies, including actions leading to environmental soil sampling, soil remediation, groundwater monitoring, groundwater sampling, and/or groundwater remediation.

State records report that 37.91 tons of asbestos-containing materials have been removed from the site's address, which suggests that an asbestos abatement has taken place at the site. If records cannot be located that show that asbestos-containing materials have previously been identified and removed, it is then recommended that an asbestos survey be conducted at each of the onsite building structures (District Office building and snack bar building) prior to any site redevelopment. Asbestos-containing building materials were phased out in the mid to late 1970s, after the onsite buildings were developed. The asbestos survey, if conducted, must be overseen by a California Certified Asbestos Consultant. The results of this survey should provide a description of the asbestos-containing materials, their locations, estimated quantity, and recommendations for removal, containment, and off-site transportation and disposal.

In addition to the asbestos surveys, it is recommended that the onsite building structures be assessed for the possible presence of lead-based paint. Lead use in commercial paint was prohibited in 1978. This study must be conducted by trained and/or licensed professionals. The results of this study should provide a description of the lead-based paint locations, estimated quantity, and recommendations for removal, containment, and off-site transportation and disposal.

As always, we recommend that soil excavations conducted onsite be monitored (by the construction contractor) for visible soil staining, odor, and the possible presence of unknown hazardous-material sources, such as buried 55-gallon drums and underground tanks (although not anticipated). If hazardous materials contamination or sources are suspected or identified, an environmental professional should evaluate the course of action required.

6.0 LIMITATIONS

The information provided in this report is based on the scope of work authorized by the client, information obtained during the investigation, ASTM Standard E1527-05, current regulatory guidelines and laws, state-of-the-industry practices, and the professional judgment of Black Rock Geosciences personnel.

This Phase I environmental site assessment, conducted in January 2012, is based on information made available during the course of this assessment. Black Rock Geosciences relied on the information collected during our investigation, presented in the former report(s), and/or provided by the client or others to conduct our investigation and arrive at our conclusions. Black Rock Geosciences assumes that information provided by others is accurate to the extent used by Black Rock Geosciences.

The information obtained during this assessment, at a minimum, complies with criteria specified in Standard Practice for Environmental Site Assessments: Phase I, ASTM Standard E1527-05. Data gaps to this standard for this report include the following:

- Interviews with adjoining property owners,
- Review of chain of title documents, and
- An assessment of the site's purchase price and the fair market value.

The findings presented in this report are carefully documented statements of fact, based on materials reasonably ascertained during the course of this assessment. They represent legally defensible distillate of the due diligence effort conducted by Black Rock Geosciences on behalf of the client. We do not disclaim or disavow our findings.

Based on the findings of this investigation, Black Rock Geosciences states its conclusions. Generally, these statements are our opinions. Any applicable facts that materially affect our opinion are so stated. Additional services are recommended when doing so is in the best interest of the client.

Services performed by Black Rock Geosciences were conducted in a manner consistent with state-of-the-industry practices, recognizing that even the most comprehensive investigation may not detect all hazardous materials/waste at the site. Therefore, Black Rock Geosciences cannot act as an insurer or certify that the site is free of hazardous materials/waste. Except as expressly set forth herein, no representation or warranty is included in our report.

The report is the property of the client for whom it was prepared. Its distribution to others is at client's discretion.

7.0 PROFESSIONAL STATEMENT

This Phase I environmental site assessment report was prepared by Mr. Quin Kinnebrew, an Environmental Professional who possesses sufficient specific education, training, and experience necessary to exercise professional judgment to develop opinions and conclusions regarding conditions indicative of releases or threatened releases on, at, in, or to a property. He is sufficiently qualified to meet the objectives and performance of this assessment. Mr. Kinnebrew holds a current Professional Geologist's license (PG# 5696) in California and has 20 years of full-time relevant experience. He obtained his Masters degree from an accredited institution (Texas A&M University) in the discipline of engineering geology. Mr. Kinnebrew has continued to build on his environmental-related knowledge through participation in continuing education and work-related experience. He has been a registered environmental assessor since 1994 (REA II# 20141).

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-05) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

State- and tribal - equivalent CERCLIS

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 11/07/2011 has revealed that there are 2 ENVIROSTOR sites within approximately 1 mile of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
GOODYEAR TIRE REPAIR Status: Refer: 1248 Local Agency	20052 BROOKHURST ST.	NNW 1/4 - 1/2 (0.431 mi.)	4	9

State and tribal leaking storage tank lists

LUST: The Leaking Underground Storage Tank Incident Reports contain an inventory of reported leaking underground storage tank incidents. The data come from the State Water Resources Control Board Leaking Underground Storage Tank Information System.

A review of the LUST list, as provided by EDR, and dated 11/10/2011 has revealed that there are 3 LUST sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
SHELL SERVICE STATION Status: Open - Verification Monitoring	20001 BROOKHURST/ ADAMS NNW 1/4 - 1/2 (0.483 mi.)		B6	11

ADDITIONAL ENVIRONMENTAL RECORDS

Other Ascertainable Records

HIST CORTESE: The sites for the list are designated by the State Water Resource Control Board [LUST], the Integrated Waste Board [SWF/LS], and the Department of Toxic Substances Control [CALSTES].

A review of the HIST CORTESE list, as provided by EDR, and dated 04/01/2001 has revealed that there is 1 HIST CORTESE site within approximately 0.5 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
SOUTHLAND CORPORATION	10001 ADAMS	NNW 1/4 - 1/2 (0.486 mi.)	B9	17

Notify 65: Listings of all Proposition 65 incidents reported to counties by the State Water Resources Control Board and the Regional Water Quality Control Board. This database is no longer updated by the reporting agency.

A review of the Notify 65 list, as provided by EDR, and dated 10/21/1993 has revealed that there is 1 Notify 65 site within approximately 1 mile of the target property.

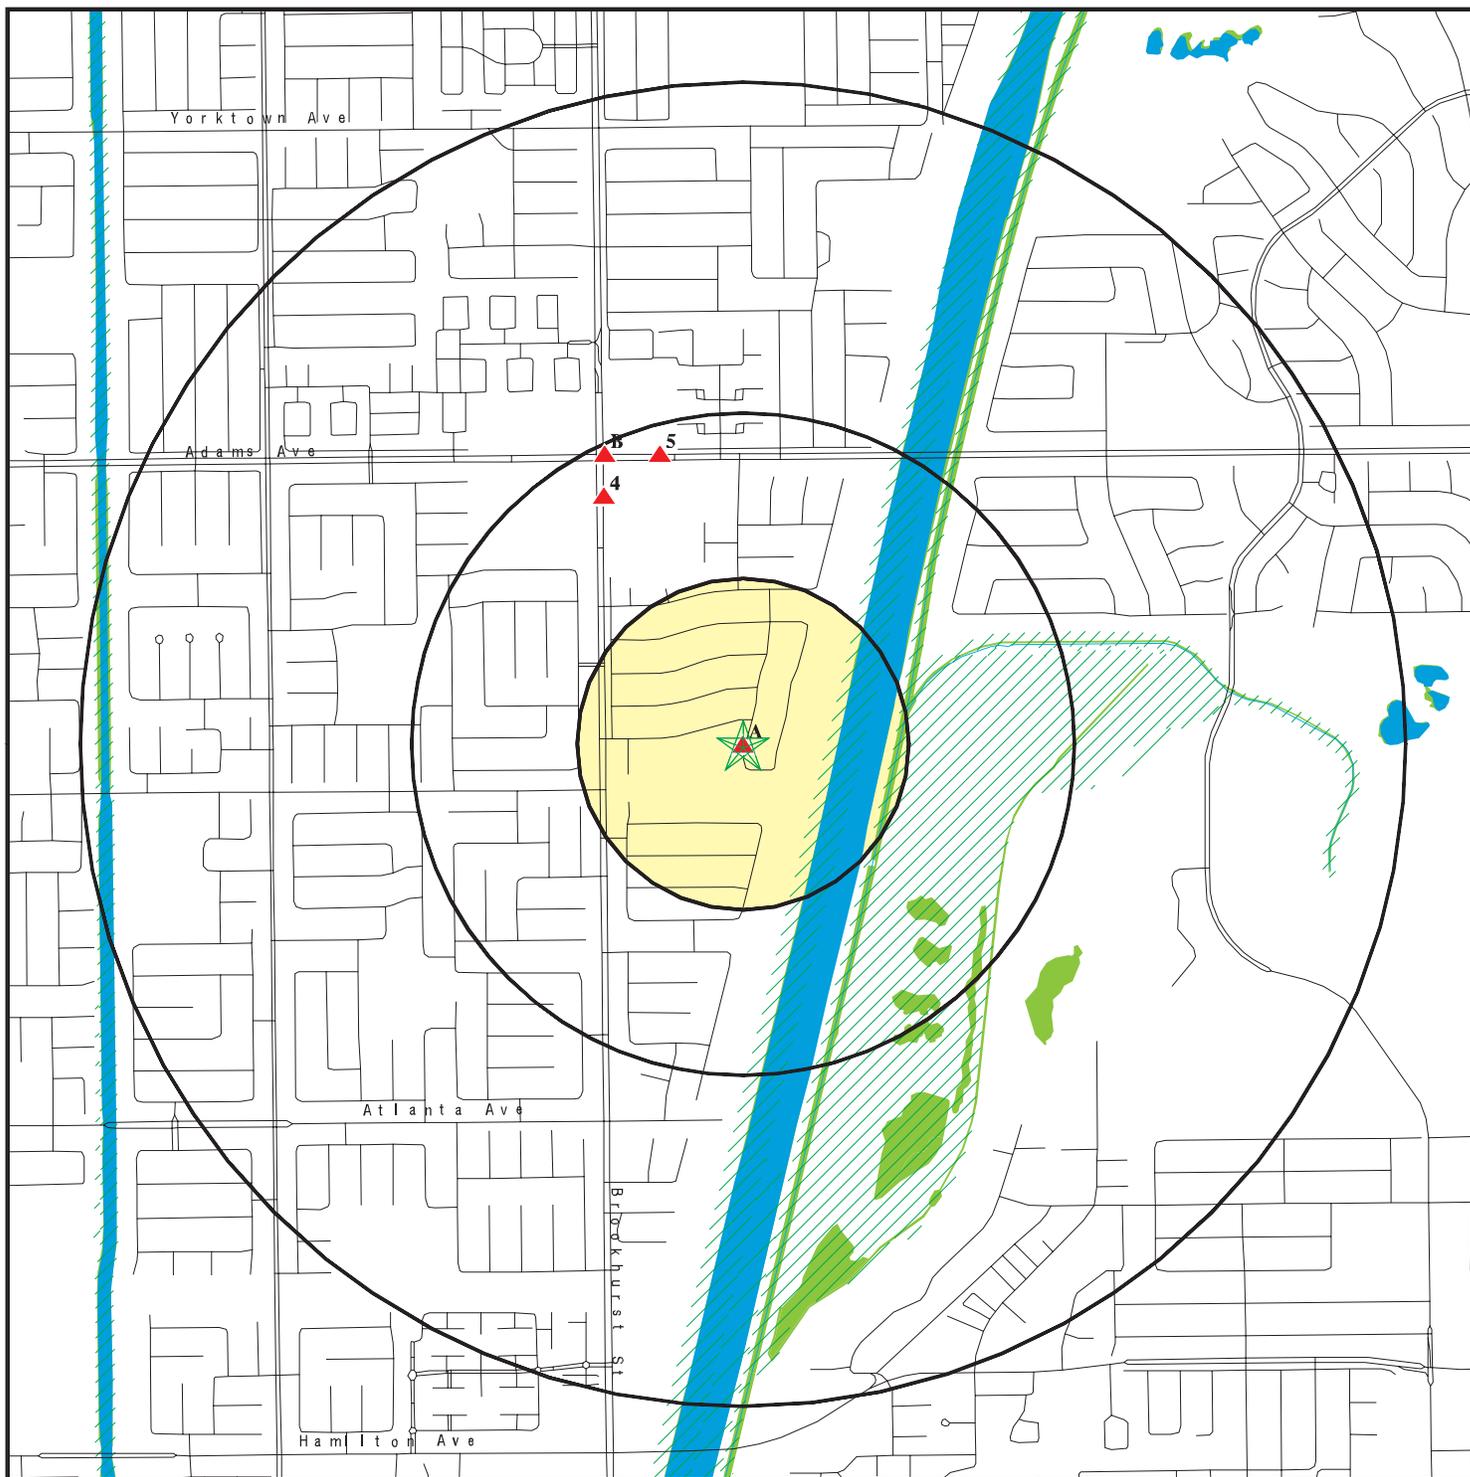

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D018
Waste name: BENZENE

Violation Status: No violations found

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 06/30/2011	Source: EPA
Date Data Arrived at EDR: 07/12/2011	Telephone: N/A
Date Made Active in Reports: 09/29/2011	Last EDR Contact: 01/11/2012
Number of Days to Update: 79	Next Scheduled EDR Contact: 04/23/2012
	Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991	Source: EPA
Date Data Arrived at EDR: 02/02/1994	Telephone: 202-564-4267
Date Made Active in Reports: 03/30/1994	Last EDR Contact: 08/15/2011
Number of Days to Update: 56	Next Scheduled EDR Contact: 11/28/2011
	Data Release Frequency: No Update Planned

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 06/30/2011	Source: EPA
Date Data Arrived at EDR: 07/12/2011	Telephone: N/A
Date Made Active in Reports: 09/29/2011	Last EDR Contact: 01/10/2012
Number of Days to Update: 79	Next Scheduled EDR Contact: 04/23/2012
	Data Release Frequency: Quarterly

Federal CERCLIS list

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 02/25/2011	Source: EPA
Date Data Arrived at EDR: 03/01/2011	Telephone: 703-412-9810
Date Made Active in Reports: 05/02/2011	Last EDR Contact: 11/29/2011
Number of Days to Update: 62	Next Scheduled EDR Contact: 03/12/2012
	Data Release Frequency: Quarterly

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 12/10/2010	Source: Environmental Protection Agency
Date Data Arrived at EDR: 01/11/2011	Telephone: 703-603-8704
Date Made Active in Reports: 02/16/2011	Last EDR Contact: 01/13/2012
Number of Days to Update: 36	Next Scheduled EDR Contact: 04/23/2012
	Data Release Frequency: Varies

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Date of Government Version: 02/25/2011	Source: EPA
Date Data Arrived at EDR: 03/01/2011	Telephone: 703-412-9810

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 06/15/2011

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 06/15/2011
Date Data Arrived at EDR: 07/07/2011
Date Made Active in Reports: 08/08/2011

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

Date of Government Version: 06/15/2011

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Date of Government Version: 06/15/2011

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal institutional controls / engineering controls registries

US ENG CONTROLS: Engineering Controls Sites List

A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

Date of Government Version: 12/30/2011	Source: Environmental Protection Agency
Date Data Arrived at EDR: 12/30/2011	Telephone: 703-603-0695
Date Made Active in Reports: 01/10/2012	Last EDR Contact: 12/09/2011
Number of Days to Update: 11	Next Scheduled EDR Contact: 03/26/2012
	Data Release Frequency: Varies

US INST CONTROL: Sites with Institutional Controls

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

Date of Government Version: 12/30/2011	Source: Environmental Protection Agency
Date Data Arrived at EDR: 12/30/2011	Telephone: 703-603-0695

	Data Release Frequency: Annually

State- and tribal - equivalent NPL

RESPONSE: State Response Sites

Identifies confirmed release sites where DTSC is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high-priority and high potential risk.

Date of Government Version: 11/07/2011	Source: Department of Toxic Substances Control
Date Data Arrived at EDR: 11/08/2011	Telephone: 916-323-3400
Date Made Active in Reports: 12/13/2011	Last EDR Contact: 12/14/2011
Number of Days to Update: 35	Next Scheduled EDR Contact: 02/20/2012
	Data Release Frequency: Quarterly

State- and tribal - equivalent CERCLIS

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities--especially those without EPA Brownfields Assessment Demonstration Pilots--minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields Initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients--States, political subdivisions, territories, and Indian tribes become Brownfields Cleanup Revolving Loan Fund (BCRLF) cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

Local Lists of Hazardous waste / Contaminated Sites

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Date of Government Version: 10/07/2011	Source: Drug Enforcement Administration
Date Data Arrived at EDR: 12/09/2011	Telephone: 202-307-1000

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

Date of Government Version: 09/14/2010	Source: Department of Energy
Date Data Arrived at EDR: 10/21/2010	Telephone: 505-845-0011

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006	Source: Environmental Protection Agency

SSTS: Section 7 Tracking Systems

Section 7 of the Federal Insecticide, Fungicide and Rodenticide Act, as amended (92 Stat. 829) requires all registered pesticide-producing establishments to submit a report to the Environmental Protection Agency by March 1st each year. Each establishment must report the types and amounts of pesticides, active ingredients and devices being produced, and those having been produced and sold or distributed in the past year.

Date of Government Version: 12/31/2009	Source: EPA
Date Data Arrived at EDR: 12/10/2010	Telephone: 202-564-4203
Date Made Active in Reports: 02/25/2011	Last EDR Contact: 10/31/2011

	Data Release Frequency: Annually

ICIS: Integrated Compliance Information System

The Integrated Compliance Information System (ICIS) supports the information needs of the national enforcement and compliance program as well as the unique needs of the National Pollutant Discharge Elimination System (NPDES) program.

Date of Government Version: 07/20/2011	Source: Environmental Protection Agency
Date Data Arrived at EDR: 11/10/2011	Telephone: 202-564-5088
Date Made Active in Reports: 01/10/2012	Last EDR Contact: 12/21/2011
Number of Days to Update: 61	Next Scheduled EDR Contact: 04/09/2012
	Data Release Frequency: Quarterly

PADS: PCB Activity Database System

PCB Activity Database. PADS Identifies generators, transporters, commercial storers and/or brokers and disposers of PCB's who are required to notify the EPA of such activities.

Date of Government Version: 11/01/2010	Source: EPA
Date Data Arrived at EDR: 11/10/2010	Telephone: 202-566-0500
Date Made Active in Reports: 02/16/2011	Last EDR Contact: 10/19/2011
Number of Days to Update: 98	Next Scheduled EDR Contact: 01/30/2012
	Data Release Frequency: Annually

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

MLTS: Material Licensing Tracking System

MLTS is maintained by the Nuclear Regulatory Commission and contains a list of approximately 8,100 sites which possess or use radioactive materials and which are subject to NRC licensing requirements. To maintain currency, EDR contacts the Agency on a quarterly basis.

Date of Government Version: 06/21/2011	Source: Nuclear Regulatory Commission
Date Data Arrived at EDR: 07/15/2011	Telephone: 301-415-7169
Date Made Active in Reports: 09/13/2011	Last EDR Contact: 12/12/2011
Number of Days to Update: 60	Next Scheduled EDR Contact: 03/26/2012
	Data Release Frequency: Quarterly

RADINFO: Radiation Information Database

The Radiation Information Database (RADINFO) contains information about facilities that are regulated by U.S. Environmental Protection Agency (EPA) regulations for radiation and radioactivity.

Date of Government Version: 01/11/2011	Source: Environmental Protection Agency
Date Data Arrived at EDR: 01/13/2011	Telephone: 202-343-9775
Date Made Active in Reports: 02/16/2011	Last EDR Contact: 01/12/2012
Number of Days to Update: 34	Next Scheduled EDR Contact: 04/23/2012
	Data Release Frequency: Quarterly

FINDS: Facility Index System/Facility Registry System

Facility Index System. FINDS contains both facility information and 'pointers' to other sources that contain more detail. EDR includes the following FINDS databases in this report: PCS (Permit Compliance System), AIRS (Aerometric Information Retrieval System), DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes), FURS (Federal Underground Injection Control), C-DOCKET (Criminal Docket System used to track criminal enforcement actions for all environmental statutes), FFIS (Federal Facilities Information System), STATE (State Environmental Laws and Statutes), and PADS (PCB Activity Data System).

Date of Government Version: 08/02/2011	Source: EPA
Date Data Arrived at EDR: 09/13/2011	Telephone: (415) 947-8000
Date Made Active in Reports: 01/10/2012	Last EDR Contact: 12/13/2011
Number of Days to Update: 119	Next Scheduled EDR Contact: 03/26/2012
	Data Release Frequency: Quarterly

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

Date of Government Version: 04/17/1995	Source: EPA
Date Data Arrived at EDR: 07/03/1995	Telephone: 202-564-4104

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method.

EDR PROPRIETARY RECORDS

EDR Proprietary Records

Manufactured Gas Plants: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Electric Power Transmission Line Data

Source: Rextag Strategies Corp.
Telephone: (281) 769-2247

U.S. Electric Transmission and Power Plants Systems Digital GIS Data

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.
Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health
Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

Source: National Center for Education Statistics
Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

Source: National Center for Education Statistics
Telephone: 202-502-7300

The National Center for Education Statistics' primary database on private school locations in the United States.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Daycare Centers: Licensed Facilities
Source: Department of Social Services
Telephone: 916-657-4041

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

Scanned Digital USGS 7.5' Topographic Map (DRG)

Source: United States Geologic Survey

A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.
